

# EVA FLOORS

BRING BEST QUALITY

## **How to take care your laminate floors?**

1. Beware of sharp edges. Although laminate flooring is very durable, sharp edges can scratch it. Cover the feet of your tables and chairs with self-stick felt pads. These felt pads will help your tables and chairs slide easily over the floor without scratching the surface. Always keep pet nails trimmed to prevent scratches.

2. If you spill your beverage or drip some water on your laminate flooring, make sure you clean up the mess quickly. Liquid that sits on the floor for a long period of time could, potentially, seep into the joints. Your laminate flooring will then absorb this liquid, causing the floor planks to swell and warp. Whenever you notice spilled liquid on your laminate floor, make sure you mop it up and dry the surface with a towel as soon as possible.

3. Sweep regularly with a soft broom. Hard brooms could scratch the surface of your laminate flooring (this applies mainly to the high gloss laminate floor). A soft plastic broom is better choice for removing bits of dirt and debris from your floor.

4. Mop the floor with a laminate floor cleaner. Because the surface of your laminate floor is different from hardwood or tile, you need a special laminate floor cleaner when it's time to clean your floor. You can purchase it at most hardware stores or a store that sells laminate flooring. Spray a light mist over the surface of your floor and then use a mop with a disposable cleaning pad or a terry cloth rag to buff your laminate flooring clean. Strictly no polishing or buffing machine is recommended for cleaning the laminate floors.

5. Place some rug by your entrances to remove pebbles and stones from visitors' shoes. Consider placing one by sinks where water spillage is a concern. You might also want to place a rug beneath cabinets or pantries that contain heavy items -- such as canned food -- that can chip or scratch your laminate flooring if they're dropped.

6. Don't ever apply wax or acrylic floor finishes, to your lovely floor. Some chemicals or solution will alter or damage the surface coat of the laminate floors.
